SEAL Systems PLOSSYS 5 & IBM Hyper Protect

Secure Cloud Output Solution

What is the Secure Cloud Output Solution?

Your IT is moving to the cloud – how about your output management? Can it move as well? What if critical business data leaks? Rest assured: yes it can, and no, it won't.

SEAL Systems PLOSSYS 5

Professional output management from the cloud – that's what PLOSSYS 5 stands for. The latest version of SEAL Systems' robust and high-performing Output Management Engine is specifically designed for cloud operation with regards to its architecture and technology. The containerized, cloud-native system brings full control and complete transparency over of all output processes for users and administrators.

IBM Hyper Protect

Hyper Protect is a highly secure hosting environment from IBM to protect your private keys, applications and data. This Hyper Protect technology ensures an industry-leading level of security.

Two powerful systems together invincible

Both systems combined provide the most secure, scalable and flexible cloud output solution available today. Your data is protected at all times – at rest, in transit as well as in use. By deploying containerized agents you can output at remote and 3rd party locations with minimal administrative effort. As a cloud hub you can also use it for pick-up printing.

Your Key Benefits

- Conversion in standard outputs like PDF, or …
- … printer formats for different output devices.
- Output generation from Linux servers and mainframes.
- SAP modules integration for output generation.
- Cloud native solution, quick to deploy.
- Minimum local infrastructure required.
- Security-first solution design.
- Scalable and extensible.
- Lightning fast.

- Ultra reliable: High availability & desaster recovery.
- Highly cost-effective.
- Future-proof, based on open standards.
- Available as a Service (SaaS).

Extension Options

- Run PLOSSYS 5 on your existing IBM zSystems or LinuxONE hardware.
- Combine local and cloud components into a single, managed cloud infrastructure.
- Use PLOSSYS 5 as Output Management System for SAP through certified BC-XOM interfaces.
